Summary

An Applied Mathematics (Data Science) student with diverse experience spanning machine learning, web development, statistical analysis, and data visualization using Business Intelligence tools like Excel and PowerBi. Have demonstrated ability to lead technical teams, automate business processes, and build predictive models across multiple domains including sports analytics and environmental forecasting.

Education

Bachelor's Degree in Applied Mathematic (Data Science track)

October 2022 - Present | Far Eastern University (Manila)

Running QPA: 3.57

Relevant Coursework:

Probability and Probability Distributions, Statistical Theory,
Linear Algebra, Data Warehousing, Linear Models,
Exploratory Data Analysis, Data Mining and Wrangling,
Numerical Analysis, Operations Research, Advanced Calculus

Relevant Experience

Data Entry Clerk (Ebay Cards)

September 2020 - December 2022 | Upwork Freelance

- Managed daily data entry and email newsletters for sports card auctions and pricing.
- Automated recurring tasks using Python (requests, openpyxl), improving efficiency.

Junior Java Web Developer

June 2022 – May 2023 | FlipIt

- Developed Java Spring Framework web application with focus on unit and integration testing using Mockito
- Implemented web scraping solutions and managed database operations

Lead Web Developer

March 2024 - June 2024 | Amadeus Music Studios Company

- Led team to develop online booking website for music studio with real-time room availability
- Live site: <http://amadeusmusicstudios.com/HOME/HOME.php>

Survey Designer and Form Handler

April 2024 – May 2024 | Mathematics Society

- Designed and implemented student polling system for campus elections using Microsoft Forms
- Formulated survey questions and validated responses to capture student preferences

Time Series Analysis and Forecast of Biomass of Tuna around West Philippine Sea

April 2025 – Present | ASEAN Data Science Explorer

- Developing global forecasting model to predict tuna biomass migration patterns in West Philippine Sea
- Applying SEAPODYM framework for fisheries density forecasting in municipal fishing areas

Skills (Programming)

Language)

- Python
- R
- Java
- SQL

Skills (Technical Skills)

- Strong Mathematics Background
- Machine Learning
- Exploratory Data Analysis
- Data Analytics
- Data Visualization
- Deep Learning (Vision)
- Web Scrapping
- Tableau
- PowerBi
- Microsoft and Google Suites
- Statistical Testing
- Time Series Analysis

Skills (Soft Skills)

- Exacting
- Curious
- Passionate about Data Science
- Fast Learner
- Clear Communicator
- Time Management

Certifications

Career Boost with Power Bi

Issued February 5, 2025 | Exodus Experts

<https://rb.gy/xd4uwm>

- Introductory course covering Power BI fundamentals and data visualization

Applied Data Science Lab

Issued February 09, 2025 | World Quant University

<https://rb.gy/xe36d2>

- Completed 8 end-to-end data science projects involving SQL/NoSQL databases, APIs, ETL pipelines, and machine learning models

Portfolio

Tableau Portfolio (My Personal Favorite)

- A set of dashboards and stories showcasing my creativity, depth, and competence in Data Visualizations
- Skills: Data Visualization using Tableau.
- Dashboard: <https://rebrand.ly/945b61>

What Makes a Great NBA Player?

- An explanatory analysis that utilized Principal Component Analysis to determine what separates Great from Average NBA Players.
- Skills: Explanatory Analysis
- Github Report: <https://rebrand.ly/b7ngagq>

NBA Archetypes Defined: Clustering Analysis to Playstyles

- Web-scraped NBA player statistics and applied hierarchical clustering to identify 27 distinct player archetypes (Offensive Powerhouse, 3pt Specialist, Rebound Machine, etc.) with 0.327 silhouette score.
- Skills: WebScraping, Clustering Analysis
- Github Report : <https://rb.gy/qnd1iv>

The Harmful Algal Blooms: A Multiple Linear Regression Model of Chlorophyll-a Concentrations in Bolinao, Pangasinan

- Built linear regression model to predict chlorophyll-a concentrations in Bolinao, Pangasinan, improving Adj R² from 0.240 to 0.46 through feature transformation and engineering.
- Skills: Linear Modelling, Data Visualization
- Github Report: <https://rb.gy/4id3q4>

Evaluating Renewable Energy System Reliability with Monte Carlo Simulation

- Validates a model for Renewable Energy System using Monte Carlo Simulation and Inference
- Skills: Statistical Computing/Testing

- Github Report: <https://rebrand.ly/o3r6kbs>

Churner Classifier: A Difficult and Non-Correlated Dataset

- Developed Random Forest classifier for imbalanced (72:28) and inherently uncorrelated data churn dataset, achieving 87.6% accuracy and 15.3% improvement over baseline through extensive feature engineering.
- Skills: Hyperparameter Tuning, Data Visualization, Clustering, Feature Engineering
- Github Report: <https://rb.gy/6rn569>

Cyber Threat Analysis (2015-2024) Dashboard

- A dashboard created using PowerBi and Python to showcase key statistics of various countries recorded cyberattacks.
- Skills: Data Visualization using PowerBi.
- Dashboard: <https://rebrand.ly/vick9s1>
